THE AC/DC POWER SOLUTION OF CHOICE

IOTA's DLS and DLS-X Series Battery Chargers and Power Converters provide reliable AC/DC power conversion for a variety of application needs. IOTA Power Products are essentially two units combined: a versatile charger for 12-volt to 24-volt battery banks as well as a reliable AC/DC converter for low voltage loads. With a record of proven performance throughout several industries, IOTA Power Products are the AC/DC power solution of choice for a number of professional and recreational users.

DLS

- **DUAL STATE BATTERY CHARGING**

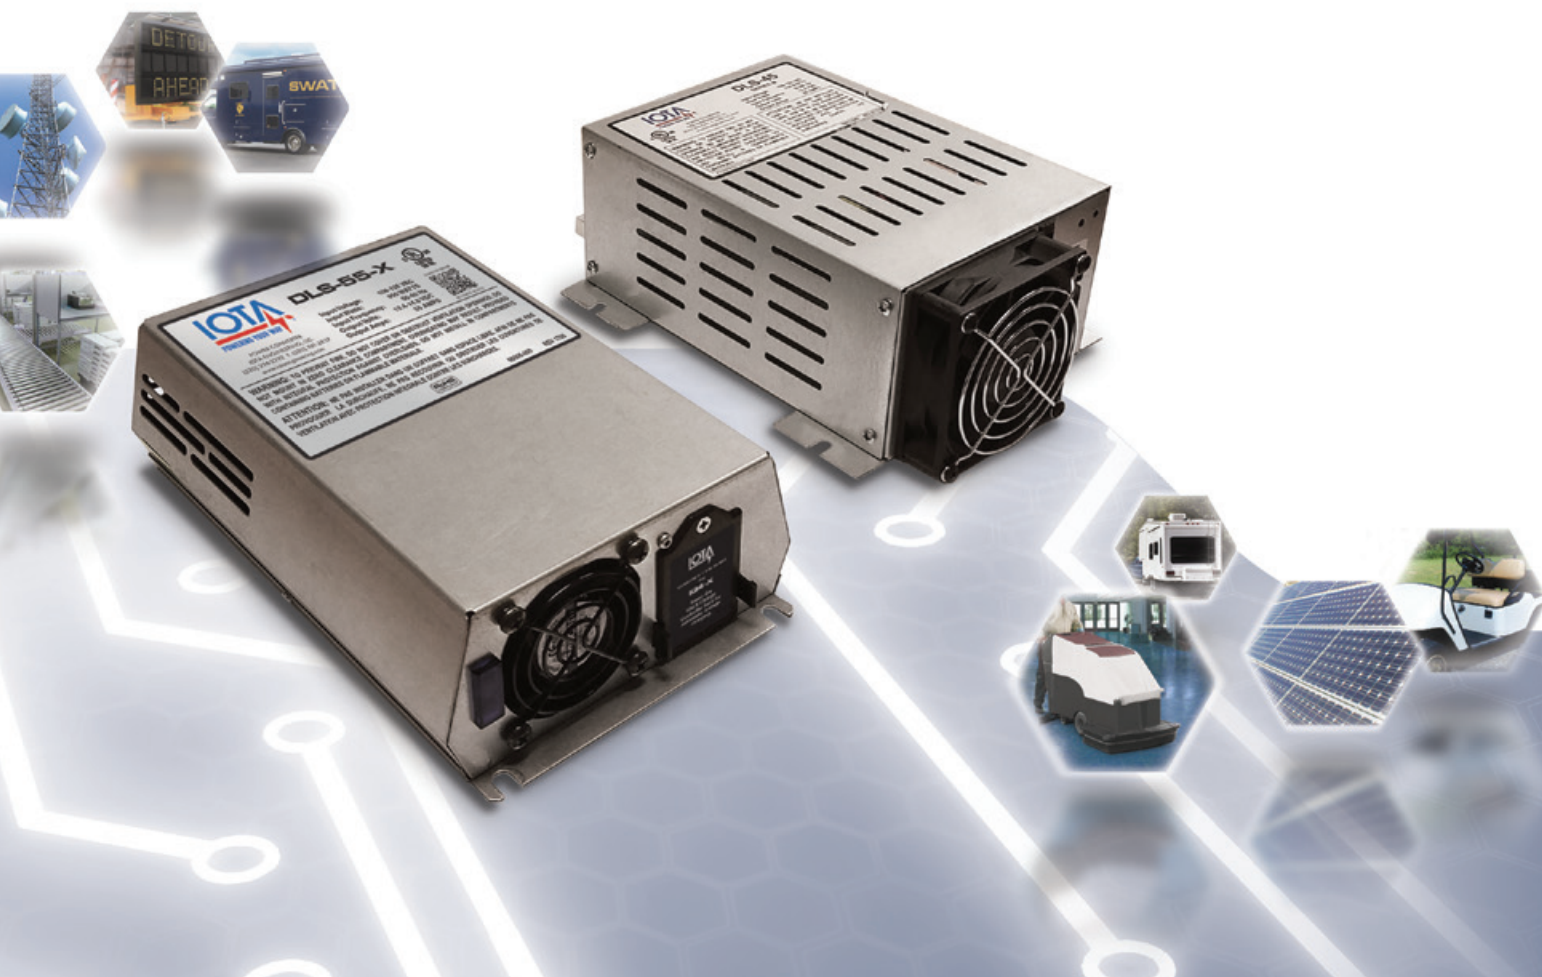

IOTA's Dual-State Charging design allows the unit to function as both a constant voltage or a constant current charger and automatically selects the optimal charging method for your battery's needs, resulting in safer, faster, and more efficient charging.

- **LINE / LOAD CONTROLLED POWER CONVERSION**

The tight line/load control of the DLS allows for clean conversion of AC voltage into steady and reliable DC power for your battery or load. By preventing erratic DC output, the DLS Series allows confident operation of onboard and sensitive equipment for optimal life and avoiding unexpected overloads.

- **SWITCH-MODE TECHNOLOGY**

IOTA charger/converters use state-of-the-art switch-mode technology, which minimizes wasted power by significantly reducing high dissipation states. The switch-mode design allows for reliable, efficient performance in a compact chassis with lower operating temperature.

TWO OPTIONS FOR YOUR BATTERY CHARGING AND POWER CONVERSION NEEDS...

Four-Stage Charge Control for Optimal Battery Performance

IOTA IQ4 and IQ4-X Charge Control Modules are the easiest, safest way to keep your batteries fully charged and in peak operating condition while maximizing useful life. By utilizing the IQ programming, IOTA chargers automatically deliver a four-stage charge cycle to your battery system. Whether you need frequently-cycled batteries charged quickly and efficiently, or are maintaining stored batteries in top condition, IQ charge control provides the assurance that your batteries will perform when you need them to.

1 BULK

Batteries are charged up to the full-rated output of the battery charger, reducing the time needed to charge the battery.

2 ABSORPTION

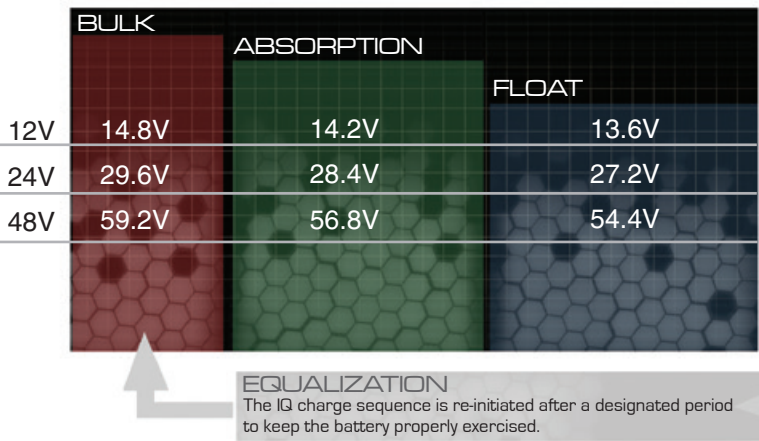

The voltage drops and the batteries are then held for a controlled period at the absorption phase to insure a full and complete charge.

3 FLOAT

The battery charger delivers a 'trickle' charge, maintaining the battery's full charge and avoiding "gassing" caused by over-charging.

4 EQUALIZATION

If the battery remains in the 'Float' state for seven days, the IQ4 delivers a Smart Charge cycle to dissolve sulfate layers and to avoid stratification.

IQ4 and IQ4-X Charge Controllers feature a green LED to help indicate charge voltage and charging phase of the smart charge controller.

THE IQ4 For use with IOTA DLS Series Chargers

IOTA IQ4 Charge Controllers provide automatic 4-stage charging for DLS Series Chargers. The IQ4 easily installs as a peripheral device by plugging the 10-inch IQ4 connection cord into the Dual Voltage Jack of the DLS. DLS chargers can also be ordered with the IQ4 charge control circuitry installed within the unit (add "/IQ4" to the model name when ordering.) Three models available: **IQ4** (for 12V and 24V), **IQ4-54V** for DLS-54-13, and **IQ4 Parallel** for 12Vdc and 24Vdc parallel charging.

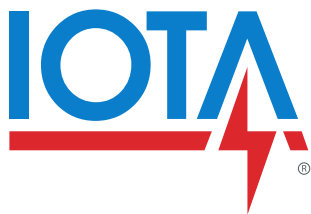

Connects easily to the Dual Voltage Jack of the DLS Charger.

THE IQ4-X For use with IOTA DLS-X Series Chargers

IOTA IQ4-X Charge Controllers are designed specifically for converting DLS-X Series Chargers into four-stage smart-chargers. No peripheral cord is needed - the IQ4-X inserts directly into the Accessory Port of the DLS-X charger. Once the IQ4-X snaps into the docking port, the smart-charge controller initiates BULK mode charging of your battery load.

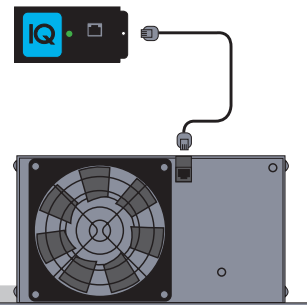

Docks directly onto the DLS-X Series Charger.

IQ SMART-CHARGING JUST GOT SMARTER!

- Automatic, adjusting charge control for your battery application!
- Compatible with any standard 15A to 90A DLS unit!
- Simply plugs into the DLS Dual Voltage Jack!

IQ4 - Great for Storing Your Flooded Lead-Acid Batteries

Our traditional IQ4 Smart Charge Controller delivers 4 basic charging functions: BULK, ABSORPTION, FLOAT, and a seven-day MAINTENANCE cycle. The IQ4 is an excellent way to maintain your stored flooded lead acid batteries, such as in an RV that is parked for extended periods of time. **54V** and **Parallel Charging** options also available.

IQ-TURBO - Rapid Charging for Continually-Cycled Batteries

The IQ-Turbo delivers a powerful yet controlled BULK charge to help charge batteries in minimal time. Perfect for batteries that are used frequently but have limited time for re-charging from a generator, solar panel system, or other auxiliary supply.

IQ-EQUALIZER - On-Demand Bulk Charging

The IQ-Equalizer is a useful charge control tool that initiates a constant current BULK charge to your flooded lead acid battery, ensuring that all cells receive an adequate, complete charge in an abbreviated timespan. After a predetermined period, the IQ-Equalizer drops into a trickle charge until re-inserted for additional equalization.

IQ-LIFEPO - for Lithium-Iron Batteries with BMS

The IQ-LIFEPO is tailored for use with today's state-of-the-art LiFePO4 batteries that use a Battery Management System. The IQ-LIFEPO allows the DLS to deliver proper voltage to charge the larger 4-cell design of the battery and remains in a stand-by trickle mode ready to deliver a fresh BULK charge when needed.

IQ-GEL - Confident Charging for Gel batteries

The IQ-GEL features an extended BULK stage but with a slightly decreased voltage that is just right for Gel lead-acid batteries. After a period of seven days, the IQ-GEL will initiate the standard Maintenance cycle to ensure the battery remains in peak charged status.

IQ-AGM - Tailored Absorption Charging for AGM batteries

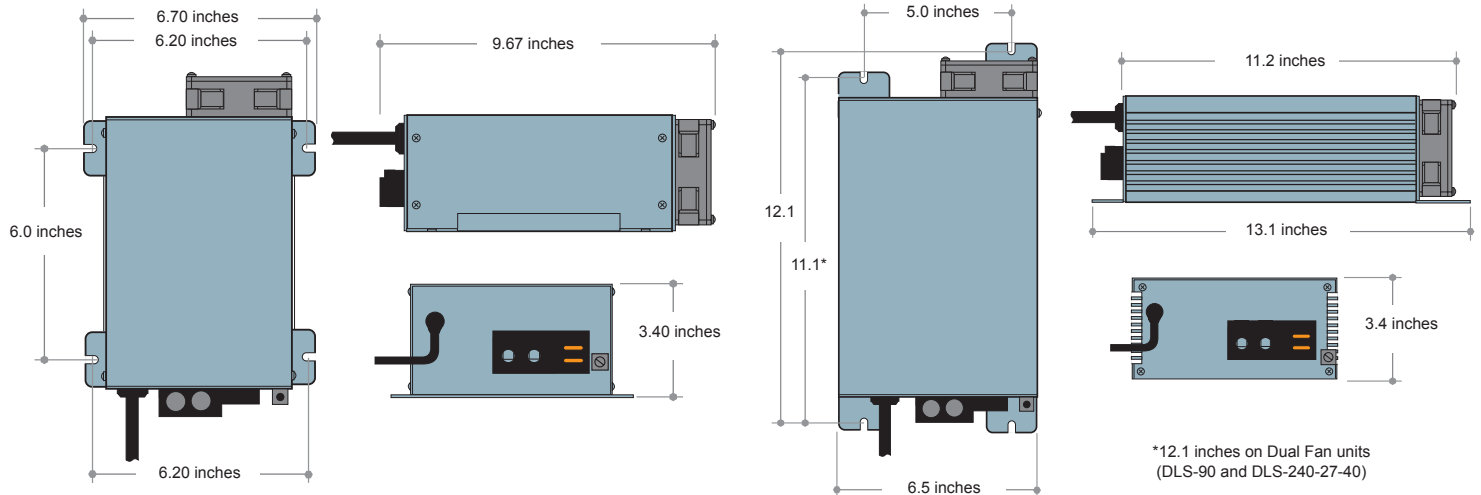

The IQ-AGM provides preferred charging for AGM (Absorbed Glass Matt) batteries by skipping the Bulk cycle and holding the battery at an optimized ABSORPTION stage before reverting to the FLOAT stage.

IQ-40-HOUR - Extended Bulk Charging for Larger Systems

For lead-acid battery banks with increased Amp-Hour ratings, the IQ-40-Hour delivers an extended Bulk charge duration to service the larger capacity before reverting to standard ABSORPTION, FLOAT, and MAINTENANCE modes.
